Table 13: Conditional Yes-vote-share differences (vs. German non-producer baseline)

Subgroup (vs. German non-producer)	Panel A (X2 share)	Panel B (X3 share)
French non-producer (cov1 alone)	-0.788	-0.707
German producer (abs producer alone)	3.359	3.007
French producer (cov1+prod+interaction)	3.100	2.747

Subgroup differences in pp Yes-vote share derived from R4 interaction (Table 5 Panel B). German non-producer is the omitted baseline.

Table 14: French–German turnout gap collapse on the absinthe ban (Vote #68)

	French (N=5)	German (N=20)	Gap (Fr–Ge)
Baseline turnout (median across 14 placebo votes 1907–1910)	44.40	56.62	-12.22
Vote #68 turnout (5 July 1908, absinthe ban)	47.92	48.02	-0.11
Change (gap collapse, row 2 minus row 1)	+3.52	-8.60	+12.12

French = cantons with French language share $\geq 50\%$ of (German+French) speakers (NE, GE, VD, FR, VS; N=5). German = remaining 20 cantons. Baseline turnout = canton-level median across 14 federal referenda 1907–1910 (placebo set used to detect mobilization deviation on #68). Gap entries are arithmetic differences between French and German group means.
